

# Cloud Acceleration

Cloud Leverage™ Cloud Acceleration provides the global infrastructure and expertise enterprises need to increase revenue through improved Internet application reliability and performance all while reducing the cost of communicating with employees, customers and prospects around the world. Our Cloud Acceleration solution leverages our leading storage, networking and managed security services to provide the optimal solution for corporate Internet application needs around the world.

Our Cloud Acceleration network is powered by our global footprint of datacenters featuring routing technology and extensive capabilities developed through deploying and operating our world-class IP Anycast network. Our Cloud Acceleration Network leverages both the Cloud Leverage network and service provider networks to deliver industry-leading global reach, performance and reliability.

## Our cloud network accelerates Internet-based applications such as:

- Software downloads
- Rich Media
- Software-as-a-Service (SaaS)
- Documentation downloads
- Digital music distribution
- Ad serving
- E-Commerce
- Portals/content aggregation
- Corporate Communications
- Webcasting
- E-Learning
- Online video
- Interactive marketing

## Key Features

- 32 node global CDN infrastructure
- Enterprise-grade security and features
- Increased end-user performance by 10x or more
- Reduce TCO
- Gain capacity on demand
- Rapid implementation

## Increase end-user performance by 10x or more

By leveraging our array of performance enhancing solutions such as TCP connection proxy, TCP multiplexing, SSL offload, SSL acceleration, dynamic in-memory content caching, and intelligent content compression, users will quickly see a dramatic increase in global web-application performance.

Web servers can be inefficient, browsers can be inefficient and latency and packet loss on the Internet make the challenge of web-application delivery a nightmare. Cloud Leverage Cloud Acceleration solves these problems.

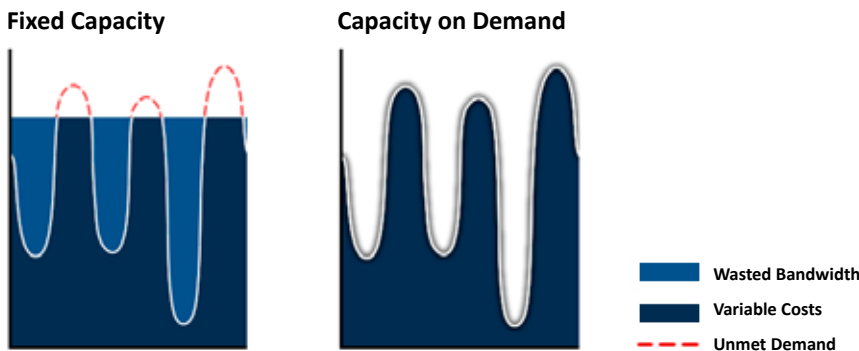

## Reduce TCO

### Deliver more applications to more users without adding more hardware.

Reduce server costs by up to 80% and deploy new Web 2.0 applications without significant infrastructure changes. Today's web applications require constant server/client interaction. By offloading connection management from web servers to our Cloud Acceleration platform you can reduce the resources required by up to 80%.

## Gain Capacity on Demand

Cloud Leverage Cloud Acceleration proactively scales edge server resources to meet the usage demands that customers place on your web operations in real-time. This flexible capacity model enables greater cost-efficiency in operation, reduces the overall costs of managing your website, and improves site performance. Your end users receive the consistent, high quality web experience they need, resulting in higher customer loyalty rates, lower operational costs and enhanced brand equity.

## Rapid Implementation

**Simply layer Cloud Acceleration on top of your existing infrastructure for an instant performance boost.** Cloud Leverage Cloud Acceleration will quickly reduce server loads and dramatically increase performance with minimal effort.
