

Enterprise Private Cloud Storage

What is Cloud Storage?

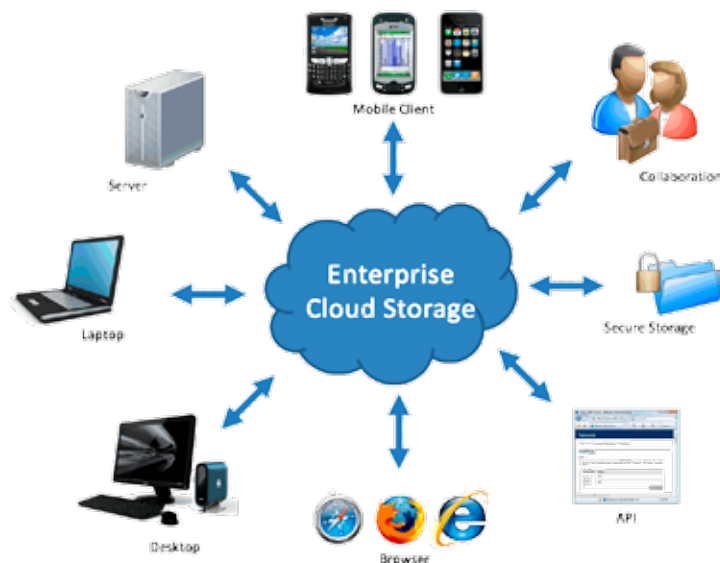

Cloud Leverage™ cloud storage is an enterprise-class file server securely located in multiple geographically diverse data centers designed to enhance performance, redundancy and data security for business customers.

Connecting to cloud storage is easy using an array of methods and devices including:

- Cloud Leverage Web Services API
- Windows® Desktop Application
- Windows® Sync Client
- WebDAV for Windows, Mac® & Linux
- iPhone® Mobile Application
- Blackberry® Mobile Application
- Windows Mobile® Application
- Web 2.0 Browser Access

Infinite Storage Scalability

The Cloud Leverage storage platform scales to support business storage needs of any size. We use virtualization technology to automatically increase capacity to support additional customers on the fly to ensure performance is always at its best.

Key Features

- Just \$0.05 per GB per datacenter per month
- Choose from 1 to 9 Global Datacenters for your data
- Numerous storage access clients and a REST API to simplify access
- Enterprise-grade security and features
- Enterprise private cloud storage options

Industries

- Technology/SaaS
- Financial Services
- Medical/Healthcare
- Media/Entertainment
- Professional Services
- Educational
- Government
- Manufacturing
- Transportation
- Utilities

Features and Benefits

Cloud Leverage offers a wide range of advanced services to end users, via Cloud Leverage Storage Access Clients or the REST Web Services API:

- **The most affordable enterprise solution:** Storage costs \$0.05 per GB per data-center per month. There is no charge for uploading and downloading storage to any cloud node unless you choose to publish a file over our Global CDN.
- **You choose where you want your data:** You choose what parts of the world and which of our 9 storage datacenters you wish to have your files safely kept.
- **Uploading of multiple files of any type:** Files of any type (documents, presentations, PDFs, website images, videos, music and more) and size can be uploaded, stored and instantly shared. There are no limits.
- **Real-time access:** Unlike online backup services, Cloud Leverage is true cloud storage, or an online filing cabinet, giving real-time access to stored files.
- **Collaboration and sharing of files with anyone, inside and outside an organization:** The Projects feature enables users to securely share files with colleagues, vendors, customers, family and friends; all without having to have an account or move files from their stored location. Control of customer data is where it belongs – with the customer.
- **Hierarchical and tag-based file organization:** Cloud Leverage features both hierarchical and tag-based file system organization and storing with Library File views for the easy search and retrieval of files.
- **Permission management:** Role-based permission management and share expiration lets customers manage their private and public shared data.
- **Notifications:** Account holders and non-account holders get notifications when files/folders are shared or when they have been assigned to a project.
- **Contact import tool:** Users can easily share to any existing contacts by importing names from Plaxo, Outlook, Yahoo, Gmail or a CSV file.
- **Global CDN Publishable URL:** Cloud Leverage lets users generate public URL links to share and publish files on forums, blogs and websites using our 32-node Global CDN for just \$0.05 per GB delivered.
- **Data security and control:** Cloud Leverage uses industry-leading 256-bit AES encryption for each stored file with SSL encryption for files in transit.
- **Patented Online Recycle Container:** Users can delete and restore files right from the Web.

Sample Uses

- Consistent, timely file sharing and collaboration with multiple branch locations, road warrior sales staff and remote workers
- Compliance-heavy email/data archiving and backup storage, but with multiple modes to quickly access critical information
- Storing, protecting and sharing large, complex data volumes and images for both public and private distribution
